INTRODUCTION

This index replaces all previous Indexes to Assessment Work in the Reindeer Mining District. Most of the entries are records of assessment work submitted from 1931 to 1989 in compliance with the Mineral Disposition Regulations 1961 and 1986. Each entry follows this format:

NTS File Number **(Off Confidential Date)**
COMPANY (or CLAIM HOLDER)
COMPANY OR JOINT VENTURE PARTNERS
Geographic location
PROPERTY DESCRIPTION
PROPERTY PROJECT NAME SHOWINGS
Latitude and longitude
Latitude and longitude
Latitude and longitude
Start of confidentiality Date of work
The type of work, by whom (up to 8 lines)
Report, number of maps, author
Assays, analyses

Confidential files **(as of 31 August, 1989)** are indicated by an asterisk after the date of work. The off confidential date (lapse excluded) is found on the first line of each entry. Elements determined by assay or analyses are listed for open files if present as a trace or more. Ore minerals reported in drill holes or in geological surveys are included if present in significant amount.

The assessment work is grouped according to the National Topographic System (NTS) of numbering map sheets, thus 74-H-04. Further subdivision into NE, NW, SE, SW quarters is made where appropiate. Apart from broad or regional surveys, work that overlaps more than one map sheet is listed in all sheets involved. Broad or regional surveys are listed once at the beginning of each lettered sheet, for example 74-H, with specific map sheet numbers given in parenthesis at the end of the entry, for example (covering parts of 74-H-6, 7, 9, 10, 11).

Non-confidential assessment files may be examined at Saskatchewan Energy and Mines, 12th Floor, Toronto-Dominion Bank Building, 1914 Hamilton Street, Regina or at the Resident Geologist's Office in La Ronge. Paper copies of non-confidential reports and maps are available in both places Details of drill core stored at Saskatchewan Energy and Mines core laboratory at La Ronge are available as Open File 85-3.
